

Daily Article (Bharath's Reading list) - Answers and Explanations 13.07.2023

Article link : <https://bit.ly/3XQTfD5> **(Could an A.I. Chatbot Rewrite My Novel?)**

1. The author is least likely to agree with which of the following?

- A. At present, AI chatbots like GPT-3 churn out generic middlebrow content that is based on broad platitudes
- B. Even if they take over some bureaucratic jobs, AI chatbots will still need to be managed by human beings in future
- C. The content AI chatbots generate is no worse than what is produced by people who rely on analytics to create content
- D. A truly unchained future version of GPT-3 may be able to generate exciting content that can replace writers and columnists

Explanation : D

Note the lines, 'The world that GPT-3 portends, instead, is one where some bureaucratic functions have been replaced by A.I., but where the people who would normally do that work most likely still have to manage the bots. Writers like me will have a digital shadow that can do everything we do, which would be a bit unnerving, but wouldn't exactly put me or my employer out on the street.'

2. GPT-3's addition to "Where the Sidewalk Ends" makes the author realize that his response to the AI chatbot :

- A. reflects his relationship with technology
- B. reflects his sense of his own knowledge
- C. reflects his relationship with the writer of the text

D.All the above

Explanation: B

Refer to the lines, 'Was the line "people come and people go" really pulled from T. S. Eliot, or is it just a random series of words that triggers the correlation in my head? My response to the bot, then, isn't really a reflection of my relationship with technology, but rather my sense of my own knowledge.'

3. The author finds GPT-3 "dispiriting" for all the following reasons except:

B.It still requires work by humans to manage the bots

C.It writes more or less from the same position of the author, like an establishment liberal

D.It is unable to produce an interesting plot despite prompting

Explanation: C

The author does not complain about the fact that chatbots write like establishment liberals. In fact, he acknowledges that without human editing, these bots go off on bigoted rants.
